

Green Statement

Amscor is committed to developing products and programs that positively impact the environment. Whether the goal is creating a healthier environment, lowering operating costs, reducing emissions or maintaining an enviro-friendly product delivery system,

- Amscor uses steel that has a 53% recycled steel content (17% Pre-Consumer 36% Post-Consumer)
- Amscor's energy efficient powder coat finishing system eliminates harmful VOCs – meaning the air is environmentally safer and our low cure powder uses less energy to cure the paint thus lowering operating costs.
- Amscor's centrally located manufacturing facility makes for fuel efficient factory-direct truck deliveries. Our factory is located within 500 miles of the installation site which qualifies for LEED points.
- Amscor is located near local subway & bus stops allowing works to use mass transit to get to and from work.

These green initiatives are significant and sustainable in the long term – as we continue to develop new environmentally-friendly initiatives for the future. We are committed to saving precious natural resources by reusing costly steel, saving energy and eliminating harmful VOC's.
