# innovative multi- purpose storage & furniture

Komar Textiles is a global leader in apparel – managing a diverse portfolio of over 100 owned, licensed, and private-label brands like Cuddl Duds, On Gossamer, and BedHead Pajamas. The company does everything from design and sourcing to manufacturing and distribution – much of that being done at their Jersey City, NJ headquarters.

Charles Komar began the company in 1908, and it quickly gained a reputation for being one of the most innovative in the industry. Komar was the company behind the first American-made slip in 1917, and in 1946, they were the first intimate apparel business to introduce nylon and rayon fibers as stable fabrics in their products.

The Komar name became synonymous with cutting edge-high value goods, and they continue to make large investments in creativity, innovation, customer service, and social responsibility.

When it came time to redesign their corporate headquarters, Komar knew it wanted the building's interior to be sustainable and functional – but they also wanted it to look modern and clean for the many

partners and collaborators that would be taken through tours of the company's offices and design rooms. The design room closets had a particular need – they needed to have sliding doors for easy access to textiles and supplies, as well as a tackable surface for pinning fabric to the surfaces during design meetings with clients or an impromptu design brainstorming session.

When Modern Office Systems was brought into the project with the furniture contractor for Komar, they knew they had a design they had done previously that would fit their needs. In collaboration with Hamilton Casework Solutions, they designed closets with a variety of shelf sizes and sliding doors they covered with tackable panels, working with Komar every step of the way until their product designers had everything they wanted for the closets.

The Komar team liked the quality of the closet mockups so much that they also asked Modern Office Systems to design the tables in their workshop with another tackable surface — a cork top — to eliminate textiles constantly slipping off of desks and making it more efficient to work with several types of textiles at a time. And, so they could maximize the space they had without having to do an additional storage build out, they also installed a few high-density mobile storage systems for hanging clothing and additional stationary shelving.

At Modern Office Systems, we provide our clients exceptional experiences through our design consulting and partnering seamlessly with members of the Architect & Design community, Furniture Dealers and End-Users to create custom work places in New York and New Jersey. From complimentary space assessments, to project design and coordination, to product installation and ongoing service long after partnering, we pride ourselves on exemplary customer service.
